PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years of experience building business applications, multi-tenant SaaS platforms, backend services, and AI-powered systems. Specialized in Laravel, Node.js, TypeScript, PostgreSQL, and React/Next.js. Proven track record of reducing manual business processes by up to 88% through enterprise integrations and automation. Strong problem-solving and organizational skills.

WORK EXPERIENCE

PT. Terasys Virtual, Jakarta

Software Engineer

01/2026 - Present

- Cut manual operational work by ~40% by translating business requirements into scalable workflows and application architecture.
- Owned the full lifecycle of internal business applications from requirements analysis to production deployment.
- Built and managed Docker-based environments and CI/CD pipelines supporting automated build, testing, and deployment.
- Maintained production stability across internal applications through ongoing maintenance and improvements.

PT. TD Automotive Compressor Indonesia, Cikarang

Full-Stack Developer

11/2024 - 05/2025

- Improved processing efficiency by ~35% by optimizing application performance and database queries.
- Built internal business applications end-to-end on HMVC architecture, keeping the codebase maintainable as requirements grew.
- Implemented backend services and system integrations to support internal workflows across departments.
- Raised reliability through systematic testing, debugging, and continuous improvements.

PT. Satu Produksi Digital, Jakarta

Backend Developer

06/2023 - 10/2024

- Built backend services and REST APIs for an e-commerce platform using Node.js and Firebase.
- Sped up backend response times through database indexing and query optimization.
- Designed database structures built for performance and reliability as the platform scaled.
- Resolved backend incidents quickly through root-cause analysis, fixing underlying problems instead of symptoms.

PT. Metropolitan Land Tbk, Jakarta

Full-Stack Developer

09/2022 - 03/2023

- Delivered custom web modules that digitized internal business processes, from development through deployment.
- Integrated new modules with existing systems and commercial software packages, avoiding costly rebuilds of working systems.
- Improved system performance, maintainability, and application availability through targeted software improvements.

PROJECT EXPERIENCE

AI-Powered Helpdesk Ticketing System

Full-stack enterprise platform for managing customer support tickets end-to-end, with a RAG-powered AI agent.

Tech: Laravel, PHP, MySQL, PostgreSQL/pgvector, RAG, LLM APIs

- Built the full ticket lifecycle in Laravel + MySQL (intake, categorization, assignment, escalation, resolution) with role-based access for agents, supervisors, and admins.
- Integrated a retrieval-augmented generation (RAG) pipeline so agents get contextual answers from the internal knowledge base without leaving the ticket. Cut average lookup time from ~5 minutes to under 1 minute per query.
- Implemented priority, category, and topic-based routing rules that auto-assign tickets to the right team. Reduced manual assignment effort by roughly 60% in the first three months of use.
- Handled testing, debugging, optimization, deployment, and post-launch improvements directly with the support team.

ISP Billing & Network Management Platform

End-to-end software platform for ISP customer management, billing, network services, and payment operations.

Tech: Next.js, React, TypeScript, Tailwind CSS, Prisma, REST API, MikroTik PPPoE, Xendit, CI/CD

- Engineered backend services, REST APIs, database workflows, and business logic for customer management, subscription, billing, and network operations.
- Integrated MikroTik PPPoE and Xendit, automating network account synchronization and online payment processing while reducing manual operational tasks by approximately 50%.
- Built operational dashboards for customer statistics, revenue, PPPoE status, network traffic, and router health, reducing manual monitoring and reporting effort by approximately 40%.
- Managed the software lifecycle from development and testing through CI/CD deployment, production troubleshooting, monitoring, and maintenance.

Outstanding Delivery Automation Platform

Full-stack web application replacing manual delivery follow-up with automated workflows, integrated with the Enterprise Planning System (EPS).

Tech: CodeIgniter, MySQL, REST API, EPS Integration

- Built the front-end portal (Auto In Portal) and backend automation covering delivery data retrieval, purchase order revisions, due-date updates, cancellations, and supplier follow-up.
- Connected the platform directly to the Enterprise Planning System (EPS), so delivery data flows into automated business processes without manual entry.
- Designed and built the Auto In Portal, a centralized interface for suppliers to submit and update their data, replacing scattered email and spreadsheet communication.
- Cut average processing time from 490 minutes/week to 60 minutes/week, an 88% reduction.

ThinkPOS

Multi-tenant SaaS point-of-sale platform for barbershops and restaurants, with cashier checkout, Excel reports, and thermal receipt printing.

Tech: Flutter, Dart, SQLite, fl_chart, Express.js, Node.js, PostgreSQL, Multi-Tenant SaaS

- Architected as multi-tenant SaaS from day one, each barbershop gets isolated data, custom branding, and independent billing on shared infrastructure, keeping operational cost low while maintaining tenant-level privacy.
- Built the cashier checkout flow end to end, cart, discount, tax, split payment, and receipt handling, designed for fast walk-in transactions.
- Integrated fl_chart for real-time sales analytics and thermal printing, plus Excel export for monthly reports, replacing the paper-and-spreadsheet routine most barbershops still use..

EDUCATION

Universitas Terbuka (2024 – Present)

Jakarta, Indonesia

Major in Information Systems

SMK Metland School (2020 – 2023)

Jakarta, Indonesia

Major in Software Engineering (Rekayasa Perangkat Lunak)

CERTIFICATIONS

MikroTik Certified Network Associate (MTCNA)

05/2023

MikroTik

SKILLS & COMPETENCIES

- **Languages:** JavaScript, TypeScript, PHP, SQL
- **Frontend:** React.js, Next.js, Vue.js, Tailwind CSS
- **Mobile:** Flutter, Dart, Riverpod, SQLite
- **Backend:** Node.js, NestJS, Express.js, Laravel, CodeIgniter, FastAPI, Multi-Tenant SaaS Architecture
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase, Redis, Prisma
- **DevOps:** Git, Docker, CI/CD, VPS, PM2, Caddy, Coolify
- **AI & Integrations:** RAG, LLM APIs, pgvector, Xendit, MikroTik, REST APIs
- **Tools:** Composer, n8n
